

Here are the steps to view and interact with the mutation network visualization:

- Open the HTML file in any web browser.
- Upload the CSV file to the website.
- Use the source node dropdown menu to select a node. This will update the visualization to show the mutation network for that node, with all other nodes.
- Each node in the mutation network will be connected to the selected node with an edge, except for itself.
- Hovering over a node will display a tooltip that shows information about the node and the mutations between the nodes.
- Hovering over an edge will also display the mutations between the nodes.
- Use the target node dropdown menu to select a target node. This will highlight both the selected source node and the target node, and show the edge between the two nodes with a tooltip.
